

Dedicated Internet Access (DIA)

Flexible Bandwidth. SLA-backed.
Nationwide.

BUSINESSES DEPEND ON THE INTERNET,
BUT ONE SIZE DOESN'T FIT ALL.

At Fusion, we provide a complete set of Dedicated Internet Access (DIA) products allowing for nationwide coverage, flexible and scalable bandwidth, and industry-leading Service Level Agreements (SLAs). We will customize a package tailored to suit your specific business needs. Our DIA solutions include DSL, T1, DS3, OC-X, and Metro Ethernet.

Reduced Costs

With DIA, you can pick from a broad selection of access technologies and in many cases, multiple service options serving any or all of your business locations. Select the most cost-competitive and save over traditional, single network providers.

More than Internet Access

DIA is used for much more than just an onramp to the World Wide Web. It's a crucial tool for data connectivity between business locations, with partners and customers. With Voice over IP (VoIP) services such as Fusion's Cloud Communications, you can transform your Internet connection into a flexible, cost effective voice and data pipe that can handle every aspect of your communications needs.

Ready for Tomorrow

Add services, augment your bandwidth, and build an IP-VPN as your business evolves. Reserve a dedicated IP block for future needs. What's more, bundle DIA with Fusion Cloud Communications and we'll take your business to productivity levels you couldn't have imagined yesterday.

The Fusion Advantage

Complete Service Portfolio

Reduce the time, cost and complexity of managing multiple providers and bills.

Expansive Network Coverage

Affordable and reliable dedicated connectivity, available nationwide.

One Provider. One Point of Contact.

Fusion alleviates complex challenges associated with managing multi-vendor environments.

Experienced Customer Support

Our knowledgeable, U.S.-based technical experts are available to assist you 24/7.

AFFORDABLE AND RELIABLE INTERNET CONNECTIVITY IN MANY SPEEDS AND ACCESS TECHNOLOGIES

DSL

DSL is an affordable, high-speed, “always on” Internet connection. It provides digital data transmission over the ubiquitous telephone network. Current DSL offerings include: ADSL, SDSL and IDSL, leveraging existing traditional telephone lines to achieve highspeed Internet access affordably.

DS3

Fusion’s high-level DS3 product is ideal for mid to large-size enterprise businesses that have high bandwidth demands on their network and demand carrier-grade SLAs. With a capacity of up to 28 T1s, our solution provides upload and download speeds up to 45 Mbps.

T1

T1 service offers reliable, cost-effective Internet access with guaranteed bandwidth. T1s provide a dependable, 1.544 mbps of throughput. Fusion’s T1 service is provided over a dedicated, non-fractional circuit. Upgrades are quick and easy. We allow your company the flexibility to increase your bandwidth as your business grows.

Optical / SONET (OCX)

Fusion provides enterprise-grade SONET connectivity. SONET broadband is an ideal solution to support the most demanding SLA requirements of any business organization. Fusion’s SONET products range from OC-3 (with speeds up to 155 Mbps) to OC-192 (with speeds up to 10 Gbps). These lines connect to our carrier partners’ fiber infrastructure to provide a complete redundant, self-healing delivery solution.

Bonded T1

Fusion uses various technologies to bond up to eight T1s to form one logical channel. Increased bandwidth becomes available by automatically load-balancing traffic over multiple T1 links. We offer speeds from 2xDS1 (3 Mbps) up to 8xDS1 (12 Mbps). Fusion’s solution can uniquely bond T1s from multiple carriers, offering you a sound, efficient and cost-effective way to guarantee Internet uptime.

Metro-Ethernet

Our Ethernet connectivity solutions provide high-capacity access to the Internet over our IP Network. Fusion’s Ethernet solutions offer customers greater bandwidth speeds and flexibility at a lower cost without the need for expensive customer premise equipment (CPE). Customers have a variety of commitment speeds and interface types to choose from as well as the ability to burst to the full committed port speed. Fusion delivers Ethernet connectivity with speeds ranging from 3 Mbps to 10 Gbps.
